

SUNDAY/SCHOOLS

An Elementastic time

The students at Trinity Lutheran School in Sheboygan were recently exposed to a science assembly that demonstrated subzero temperatures, the effects of air pressure and other classic concepts. They were led by the Elementastics Science Team that not only provided the assembly, but provided 19 students with six hours of hands-on science experiments. Pictured are students dealing with electrical circuitry in one of the six hour-long tutoring sessions. **Submitted photo**
